JOB DESCRIPTION / MAIN TASKS PERFORMED

As a computer programmer you will be actively employed writing the step by step instructions that direct computers to process information. As such, the program you write will be guided by what your company needs and what your employers want to input into their system.

It does not matter whether you are doing an accounting, a science or an administrative program, you'll take your lead from the software engineer designing the first part of the program and then write the codes for this program.

SKILLS AND REQUIREMENTS

A computer programmer must have a Bachelor Degree in computer science, mathematics, or information systems, as well as the knowledge of the major programming language. However, some people with the right aptitude but the wrong degree have still managed to become highly successful programmers. In some cases, companies may be willing to take you on and train you to their requirements as junior programmer.

INCOME/ SALARY / WAGES

Computer programmers work in manufacturing, industry, engineering, government offices, hospitals, and educational institutions. Many experienced computer programmers advance to supervisor or higher levels and there are several types of programmer.

The computer programmer works on application programs such as designing accounting procedure. The Applications computer

programmer will meet with the client and designers to understand the scope of the project before they begin to write the code. The Systems computer programmer writes programs to maintain and control systems software that may run systems such as a large office's computer network. Whatever type of computer programmer you want to be there is a wide marketplace for your skills and good people are in high demand.

Programming pays well and a junior programmer can expect a salary well above the national average and start, depending on location and nature of industry, from around £20k. Senior programmers with specific expertise can easily earn in upwards of £70k and consultancy rates of between £70 and £150 per hour are not uncommon.

HOURS PER WEEK

The maximum duration of working time is 48 hours per week for workers over 18 years of age. Certain sectors may, however, apply a longer term which must imperatively be mentioned on the contract of employment.

Dear Joe Campbell,

Application for the role of C++ Developer

Reference of the ad : <http://jobview.monster.co.uk/c-developer-programmer-job-london-london-uk-178753799.aspx?mescoId=1500127001001&jobPosition=6>

Regarding the C++ Developer/Programmer position currently advertised on Monster.co.uk, please find attached a copy of my CV for your consideration.

I have recently graduated with a Bachelor of Science in Computer Science from François Rabelais University and hope to put this to use in the field of Software industry.

The course covered a lot of subjects, and I was particularly attracted drawn to object-oriented programming.

Having extensively researched your company's values and products, I was especially interested in help you to develop highly resilient applications that display market activity and provide real-time data to clients in the Financial industry. I am also able to help you to build compelling and interactive user interfaces to expose business-critical market data. Moreover With approximately 200 locations worldwide I feel it would be the excellent place for me to begin my career in a big company and I believe I can be an excellent addition to your team.

Programming is something I was always interested since my school days. I am a C++ developer passionate about working on Server side development. You mention in the ad you are looking for someone with an interest in Networking technologies. I completed a 2 month project in my final year and worked heavily with TCP/IP.

I understand IT but I understand that other people do not and I feel that my communication skills are very good and that I can explain technical detail to non technical users. I am also able to work with people and traveling frequently does not bother me. Furthermore, I have knowledge of object-oriented programming which is currently the most widely used.

I master the programming language c ++ which is the quality required for this job and I have knowledge about real-time solutions and historical prices, guidance data, analysis, portfolio management tools and order management. I'm currently available. I look forward to hearing from you soon.

Yours sincerely
BESLAY Alix
